

The software package of the eNX Suite

Developed for production management

Production management software, starting from the basic tables and master data, to management of production orders and all related data, up to **their analysis**.

The **user-friendly interface** allows for intuitive data entry and analysis. The technological platform used by GP PROGETTI to develop **eCube** allows for **fast and dynamic data browsing**, with no need to follow a pre-set and unique path to obtain the desired information.

MAXIMUM READABILITY AND NATURAL RECOGNITION OF THE ELEMENTS TO SUPPORT THE USER'S WORK

Data navigation in just a few clicks

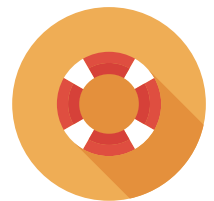

Fast and intuitive data entry

Fast addition and elimination of search filters

No pre-set paths and binding menus

Significant reduction of reporting errors

eCube lets you configure a manufacturing company from scratch, adding departments and resources. In addition, **eCube** lets you enter and analyse data, with the option to display planning and production data.

eCube IS USED TO DEFINE AND MANAGE:

System configuration tables

01

02

Basic master data

Bill of Materials

03

04

Processing cycles

Warehouse

05

06

Equipment

Order management
(customer, supplier and production)

07
