eMade

The eNX suite module to monitor the progress of past production

Thanks to the graphics, the module lets you **analyse data quickly and intuitively**, with the advantage of being able to immediately detect: **downtime, rejects, hours of production and efficiency.**

eMade has the following features/functions:

Display of production sheets	01
Graphical comparison between various production sheets	02
Graphical display of downtime break-down	03
Display of machine downtime by cause	04
Display of downtime by resource, department and global	05
Mono and two-dimensional Pareto charts relating to machine downtime	06
Chart display	07

CHECK "WHAT HAPPENED YESTERDAY IN PRODUCTION"

eMade lets you know "what happened yesterday in production" easily, with the **advantage** of not having to analyse data in tabular format.

IMMEDIATE PRODUCTION DATA FEEDBACK

Thank to **eMade** you can have **immediate feedback** on production data in order to make the right decisions relating to future planning in a short time.
