

## The software package of the eNX Suite Developed to manage Quality in manufacturing Companies.

A user-friendly interface that allows for intuitive data entry and analysis. The technological platform implemented by **GP Progetti** for the **eQuality** project allows for fast and dynamic data navigation, without the obligation to follow a pre-set and unique path to obtain the desired information. eQuality

### MAXIMUM READABILITY AND NATURAL RECOGNITION OF THE ELEMENTS TO FACILITATE THE USER'S WORK

Data navigation in just a few clicks

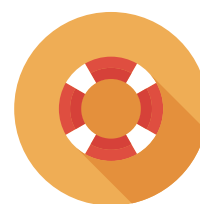

Fast and intuitive data entry

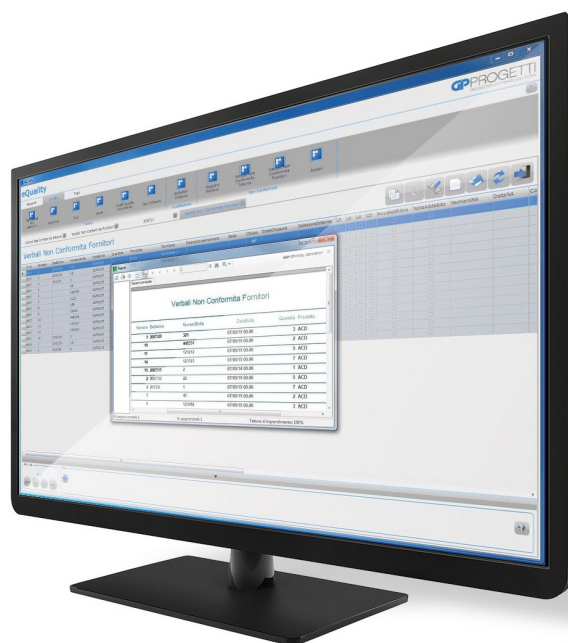

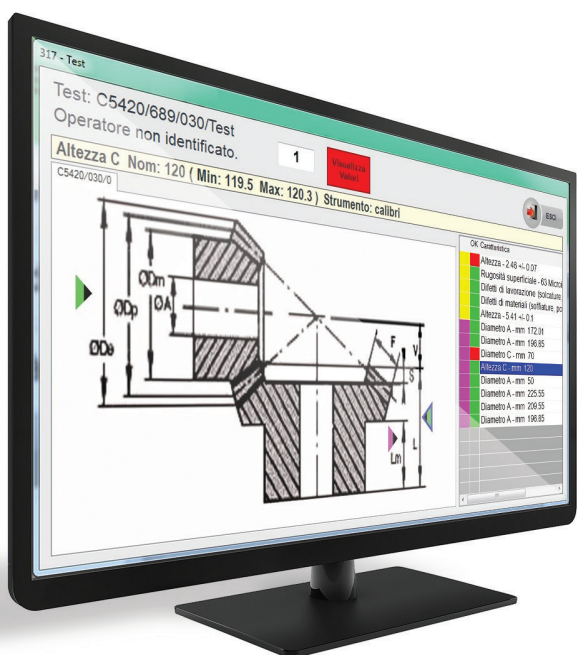

Fast addition and elimination of search filters

No pre-set paths and binding menus

Significant reduction of reporting errors

**eQuality** is included in a **fully integrated manner** in the broader operational data management throughout the company's production process, both as **complementary activity of a Production Order** (for the benefit of Production Operators), and as a **specific tool** for off-line control and inspections (for the benefit of Quality Operators).

## THE OPERATIONS SUPPORTED BY eQuality CONCERN:

Issue of in-house production non-conformity Reports

01

Integrated management of Quality documents

02

Issue of Supplier non-conformity Reports

03

Generation of control plans

04

Acceptance of incoming material

05

06

Management of in-process checks

07

Recording and analysis of checks performed

08

Management of preventive and corrective actions

09

Complaint register management

10

Management of measuring instruments
